

Artwork Preparation Checklist

1. General Requirements

Fonts: Please package and send all fonts used in your file, or convert all text to outlines to ensure correct rendering.

Color Mode: Ensure all files are submitted in CMYK color mode for accurate print reproduction.

2. Bleed & Dielines

Example of 0.25" bleed extending past the red dieline (cut line).

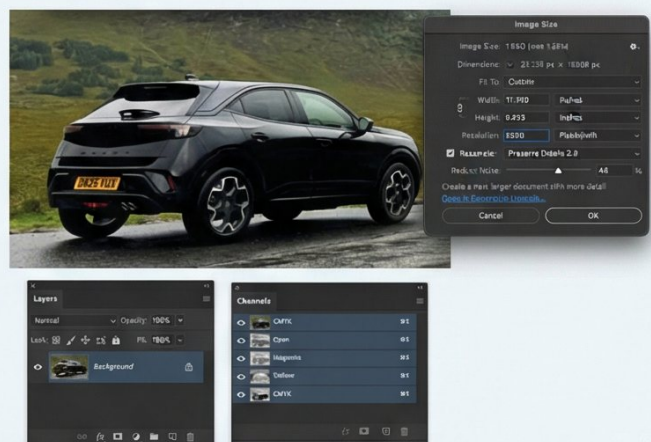

Place all dielines and cut paths on a separate layer named 'Dieline' or 'Cut', distinct from the artwork.

3. Size & Photoshop Specs

Submit files at the exact finished size (100% scale) for production.

For Photoshop files, flatten all layers, ensure **CMYK mode**, and keep **dimensions under 30,000 pixels** in width and height.
